

GTEK Belt Conveyor

● Description

Conveyor is a kind of material handling machinery used for continuously materials conveying in a certain line. It is also known as the continuous conveyor. Horizontal, inclined and vertical conveying are all available with conveyor. Generally the conveying line of a conveyor is fixed.

● Application

Conveyor is widely used because of its large conveying capacity and long conveying distance. Several production processes could also be carried out on a conveyor.

Conveyors generally include belt conveyor, apron conveyor, scraper conveyor, bucket conveyor, bucket elevator, suspending conveyor, etc.

● Technical Specification

Model	Conveying Capability (m ³ /h)	Diameter of Roller (mm)	Motor Power (kW)
B500	23-143	500	1.5-9
B650	40-243	630	1.5-4.5
B800	75-500	630	2.2-7.5
B1000	140-770	800	4-11
B1200	200-980	1000	5-22
